Game Overview

Genre: Action, Roguelike, Top-down Shooter
Platform: Mobile (iOS & Android)
Perspective: Top-down, Single-player
Monetization: Free-to-Play with IAPs and Ads

Core Gameplay Loop

- The player enters a level.
- The player fights enemies while dodging their projectiles.
- Each level up offers random upgrades (skills).
- Complete the stage to earn rewards (coins, scrolls, gear).
- Use rewards to upgrade character and gear before attempting harder stages.

Gameplay

Run Initiation:

- The player uses Energy to begin a run.
- The player selects a Hero and uses equipped gear.

Room-by-Room Combat:

- Each room spawns a wave of enemies.
- The player must survive and eliminate all enemies to proceed.
- Movement is key: shooting only happens when stationary.

Skill Acquisition:

The player gains XP by defeating enemies. XP is dropped individually by each defeated enemy.
The XP curve is incremental. Example XP thresholds per level:

- Level 1: 10 XP
- Level 2: 30 XP
- Level 3: 60 XP
- Level 4: 100 XP
- Level 5: 150 XP
- ...and so on, increasing by ~50–70 XP per level.

Upon leveling up, the player selects one of three randomly presented skills.

Skill choices are drawn from a weighted pool depending on the current skill loadout and synergy rules.

Skills can stack and synergize to create powerful combinations (e.g., Bouncy Wall + Ricochet + Front Arrow).

There is no hard cap on how many skills a player can acquire during a run; the number of skills gained depends on how long the player survives and how many enemies they defeat (average 15–25 skills per full run).

Some skills are temporary (active for the current run), while others can be upgraded permanently through talents or equipment effects.

Weighted Pool Explained

All possible skills (e.g., Multishot, Ricochet, Freeze Strike) exist in a pool.
Each skill has a weight, which is a number that affects how likely it is to be picked.

For example:

- Ricochet = weight 10
- Fire Circle = weight 5
- Shield = weight 1
- This means Ricochet is 10× more likely to appear than Shield.

Dynamic Weight Based on Loadout

The game adjusts weights based on what you already have.

For Example:

- If you already have Bouncy Wall and Diagonal Arrows, the game increases the weight of Multishot, Front Arrow, or Piercing Shot.
- It decreases the chance of offering skills that don't synergize, like Poison Touch if you're building a ranged crit build.

Synergy Rules

Certain skills work better together — this is synergy.

The game favors combos like:

- Ricochet + Bouncy Wall + Multishot → Makes projectiles bounce, split, and hit multiple enemies.
- Freeze Strike + Crit Up + Attack Speed → A powerful control + DPS combo.

If you already have two skills that synergize, the game will try to offer a third that completes the combo.

Enemy Variety and Challenges:

As the player progresses, new enemies are introduced with unique attack patterns and behaviors.
Enemy rooms scale in difficulty with faster movement, more complex patterns, and increased numbers.

Challenge types include:

- Projectile dodging (bullet hell-style attacks)

- Zone control (enemies that manipulate environment)
- High burst damage enemies (e.g., charge or explosion-based)
- Crowd control threats (freezing, slowing, knockback)
- Enemy combinations that require strategic prioritization

List of Enemy Types:

Melee Enemies (Close-range attackers)

- Slime – Basic melee chaser (HP: 100, DMG: 50)
- Zombie – Slower but tankier (HP: 200, DMG: 75)
- Charging Minotaur – Dashes at player in a straight line (HP: 350, DMG: 120)
- Ranged Enemies (Shoot projectiles)
- Skeleton Archer – Fires straight arrows (HP: 120, DMG: 60)
- Fire Wizard – Launches slow fireballs (HP: 150, DMG: 80, AOE effect)
- Bat Mage – Rapid-fire small projectiles (HP: 100, DMG: 30 x 3)

Exploding Enemies

- Goblin Bomber – Runs toward player, explodes on contact (HP: 90, DMG: 200 AOE)
- Suicide Skull – Floats and explodes at low HP (HP: 80, DMG: 150 AOE)
- Flying Enemies (Ignore obstacles)
- Bat – Fast, low HP (HP: 90, DMG: 40)
- Ghost – Passes through walls, slower (HP: 150, DMG: 60)

Shielded Enemies

- Stone Guardian – Blocks front attacks (HP: 300, DMG: 50)
- Shield Knight – Alternates between shield up/down (HP: 250, DMG: 100)

Summoners

- Necromancer – Summons skeletons over time (HP: 200, DMG: 40 per summon)
- Spider Queen – Lays egg traps that spawn spiders (HP: 400, DMG: 90)

Environmental Manipulators

- Frost Wizard – Creates ice patches that slow the player (HP: 180, DMG: 70 + slow)
- Lava Golem – Leaves lava trails (HP: 400, DMG: 100 + burn)

Mini-Bosses & Elites

- Dark Knight – Fast attacks, spawns after elite rooms (HP: 1200, DMG: 200)
- Fire Drake – Flying boss with flame breath and fireballs (HP: 3000, DMG: 150–300)
- Boss Types (Every 10 levels)
- Unique mechanics and multiple attack phases
  Examples:

- Fire Golem – Fireball barrage + ground slam (HP: 3500, DMG: 150 per fireball)
- Death Skull – Summons minions, teleports (HP: 4000, DMG: 120 per projectile)
- Wind Serpent – Wind tunnels, fast movement (HP: 4500, DMG: 180)

Mid-Run Events:

Mid-run events are non-combat encounters or reward opportunities that appear between combat rooms to offer temporary benefits or trade-offs. These are critical to altering the flow of gameplay and providing strategic choices.

Types of Mid-Run Events:

Angel Room:

Randomly appears after clearing a few combat rooms.

Offers one of the following options:

- Heal 30-50% HP
- Gain a temporary buff (e.g., +Attack, +Crit Rate, +Attack Speed)
- No cost to the player.

Devil Room:

Appears after elite/boss rooms or Angel rooms under certain conditions (e.g., entering with high HP).

Offers powerful, rare abilities like Bloodthirst, Extra Life, or Dark Touch.

Requires payment of a portion of current HP or watching an ad.

Treasure Room:

May appear randomly every few rooms.

Contains chests that drop:

- Coins
- Scrolls
- Rare Equipment (chance-based)
- Gems (very rare)

Lucky Wheel / Mystery Slot Machine:

A randomized spinning wheel triggered mid-run.

Rewards can include:

- Temporary power-ups
- Coins
- Minor heal
- Damage boost next room

- Typically activated by ad viewing or reaching milestone rooms.

Shrine Events (Random Stat Boosters):
Rare altars appear in some chapters.
Grant passive buffs until death (e.g., faster movement, +HP Regen).
May require a sacrifice: gold, energy, or gear durability.

Heroic Spirit Appearances:
Rare spirit allies appear mid-run and temporarily assist in combat.
Auto-attack enemies alongside the player for several rooms.

Death and Progression:

When the player dies, the current run ends immediately and all temporary abilities are lost. The player is returned to the home screen, where they keep all collected coins, scrolls, and any new gear acquired.

A one-time revive option is presented, which can be used by spending premium currency (Gems) or watching an ad.

Death is not punished harshly—players are encouraged to treat every run as an opportunity to gather resources.

Persistent progression systems ensure continual advancement:
Talents, Gear, Hero Levels, and Spirits continue to grow stronger even after failed runs.

Post-death flow:

- Summary screen shows enemies defeated, rooms cleared, XP gained, and loot collected.
- Rewards are added to the player's inventory.
- Players may choose to upgrade talents, fuse gear, or prepare a new hero build.

Preparation for Next Run:

Hero Selection:

- Choose from unlocked heroes, each with unique stats and abilities.
- Factor in chapter difficulty and synergy with chosen gear.

Gear Loadout:

- Equip or swap out weapons, armor, rings, and pets.
- Gear impacts base stats and synergy with in-run skill choices.
- Upgrade gear via scrolls and fusion to raise rarity and power.

Talent Upgrades:

- Spend collected coins to unlock or enhance passive talents.
- Talents are persistent and affect HP, ATK, movement speed, etc.

Spirit Management:

- Assign 1–2 spirit companions who assist in battle.
- Spirits can also be leveled up for improved damage and effects.

Chapter/Stage Selection:

- Choose which chapter to enter based on unlocked progress.
- Higher chapters yield better rewards but have tougher enemies.

Optional Buffs:

- Players can activate temporary starting buffs (e.g., extra HP, faster attack speed) via IAPs or daily bonus rewards.

Run Initiation:

- Pay Energy cost to start.
- Tap Play to enter the dungeon and begin the run.

Controls

Touch screen joystick for movement (auto-shoot when stationary).
No attack button; shooting is automatic when the player stops moving.

Game Progression

Game progression in this game is structured to provide escalating challenge and player empowerment through procedural level generation, unlockable worlds, gear/talent advancement, and roguelike resets. Players advance by clearing chapters made up of stages, unlocking new features, encountering new enemies, and gradually upgrading their persistent abilities.

Chapter Structure:

Each world is divided into "Chapters". Chapters are collections of 30-60 procedurally generated rooms. Players must clear all stages of a chapter in one run without dying.
Each chapter introduces new biome aesthetics, enemy types, boss mechanics, and traps.

Later chapters introduce new mechanics such as environmental hazards, elite enemies, and miniboss rooms.
Boss rooms typically occur every 10 levels, with increasing difficulty.
Chapter progression is linear, with each chapter increasing in overall complexity and requiring better gear and talent investment.
Players cannot skip chapters and must complete the previous one to unlock the next.
Mid-chapter checkpoints do not exist; failure resets the player to the start of the chapter.

Rooms within chapters include:

- Standard combat rooms
- Healing or angel rooms
- Devil deal rooms (offer strong skills in exchange for HP)
- Treasure rooms
- Trap-only navigation rooms
- Elite enemy encounters

World Unlocks:

Completing key milestone chapters unlocks new themed worlds.
Each world introduces a visually and mechanically distinct environment that challenges the player in new ways.
World unlocks are used as soft content gates that also signify new gear or talent thresholds.
Some worlds may have alternate rule sets, special enemy types, or unique boss mechanics.

Environmental Hazards by World:

- Poison Pools (DoT over time unless talent-equipped to resist)
- Lava Streams (Fast damage, forces repositioning)
- Ice Floors (Low friction, precision dodging challenges)
- Fog/Mist (Reduces visibility and auto-aim effectiveness)

Unlock Requirements:

- Complete prior chapter
- Meet minimum gear power rating or recommended talent tier
- Sometimes gated behind a specific milestone (e.g., Hero Level 20)

Unlock Rewards:

- Access to new enemies and bosses
- New skill drop synergies during combat
- Higher gem and scroll drop rates
- Unique stage mechanics or events only available in that world

---

Difficulty Scaling:

Difficulty ramps up gradually across chapters, with specific scaling factors applied to enemies and encounters.

Enemy Scaling:

- HP and Damage increase exponentially per chapter.
- Boss enemies scale more aggressively than standard enemies.
- Elite enemies introduced in later chapters may have double/triple HP and specialized abilities.

Attack Density & Patterns:

- Later stages feature tighter bullet patterns, increased projectile speed, and complex enemy formations.
- Enemies may spawn in waves within a single room.
- Trap combinations with enemy spawns add to chaos and challenge.

Environmental Hazards:

- Traps become more frequent, faster, and are positioned to force strategic dodging.
- Hazards may also deal scaling damage based on chapter level.

Healing Opportunities:

- Healing frequency is reduced in higher chapters.
- Angel rooms become rarer and sometimes only offer a single choice.

Skill Drop Adjustment:

- More synergy-based and rare skills become available in higher chapters.
- Players are expected to create well-rounded builds with elemental or status effects.

Player Requirement Scaling:

- Players must have higher-tier gear and talents to survive.
- Recommended Power Level (based on gear and talents) is displayed before entering a chapter.
- Companions (spirits) and pets become crucial for crowd control and burst damage.

Example Scaling Curve:

- Chapter 1 Enemy HP: ~100–200 | Damage: ~10–20
- Chapter 10 Enemy HP: ~3000–5000 | Damage: ~100–150

- Chapter 20+ Boss HP: ~10000–15000 | Damage: ~300–400

Hero Mode / Hard Mode:

Unlocked after completing base chapters.

Reuses maps with:

- Heavier enemy density
- No healing in-between stages unless perked
- Stronger boss variants
- Additional environmental dangers
- Increased trap complexity and frequency
- Rare skills and talents more likely to drop
- Some enemies may have unique hard-mode-only abilities
- Angel and Devil rooms may offer altered or cursed options

Hero Mode Rewards:

- Increased gem and resource rewards
- Exclusive gear drops or cosmetic unlocks
- Unlocks achievements and leaderboard tracking
- Required for 100% completion and top-tier progression

Milestone Rewards:

Completing chapters unlocks:

- New gear slots
- New talents
- Ability to equip higher-tier gear
- Access to new game modes
- Spirit companions with new abilities
- Achievements and collection bonuses
- Increased base Hero XP gains

Some chapters reward permanent gems, energy boosts, or rare scrolls

Milestone chapters may unlock additional heroes or access to premium skill trees

Players also gain cosmetic rewards (e.g., avatars, hero skins, aura effects) at certain chapter milestones

Select chapters offer one-time bonuses such as:

- Epic gear boxes
- Premium currency packs
- Permanent stat boosts

Gear Gates:

Chapters and modes are locked behind minimum Gear Power Ratings.
Gear Power is calculated from equipped gear, including weapon, armor, ring, spellbook, pets, and accessories.
Gear rarity, level, and fusion tier (common → epic → legendary → ancient) all contribute to Gear Power.
Players must upgrade gear through merging duplicates, using scrolls, and farming resources.

Typical Gear Gates Examples:

- Chapter 5: Requires ~2000 Gear Power
- Chapter 10: Requires ~4000 Gear Power
- Chapter 15: Requires ~6500 Gear Power + Hero Level 30
- Hero Mode Chapter 1: Requires ~8500 Gear Power + Legendary Gear

---

Purpose of Gear Gates:

- Prevents players from progressing with underpowered builds
- Encourages engagement with the upgrade system
- Creates long-term progression goals
- Soft-locks players into farming and grinding cycles until they're properly prepared

---

Bypassing Gear Gates:

- Temporary boosts (e.g., friend support, time-limited power-ups)
- Event rewards that boost gear quickly
- Premium purchases for gear bundles or upgrade materials
- Luck-based drops from daily or chapter-end rewards

New Mechanics Per Chapter:

Chapter Range	New Mechanics Introduced
1–3	• Basic movement, shooting, and dodging • Straight-line enemy projectiles • Spike pits and arrow traps • Simple AoE boss patterns

4–6	• Elemental floor traps: fire, ice, poison • Slippery floors • Pressure-activated traps • Tracking or bouncing projectiles
7–9	• Wind zones (pushback) • Moving walls and rotating turrets • Combined traps (e.g., fire + spikes) • Fog of war/limited visibility
10–12	• Radial and spiral attack patterns • Teleporting enemies • Summoner-type enemies • Bosses with phase transitions
13–15	• Rotating beam hazards • Timed activation traps • Bullet hell formations • Zone-based buffs/debuffs
16–18	• Gravity-modifying rooms • Complex trap dodging • Enemies with immunity types • Inverted control rooms
19–21	• Timed kill-room challenges • Pre-combat trap navigation • Conditional enemy spawns • Interactables: barrels, destroyables
22+	• Multi-layered mechanic rooms • Mid-fight environmental shifts • Skill-disabling enemies • Light/dark cycle mechanics

---

Meta Game Integration:

The meta game in Archero connects the core gameplay loops with long-term progression, creating reasons to return and keep engaging with new chapters.

Key areas include:

Persistent Progression Systems:
Hero level-ups provide incremental power even after death.
Talent trees, gear upgrades, and pet progression persist across runs.

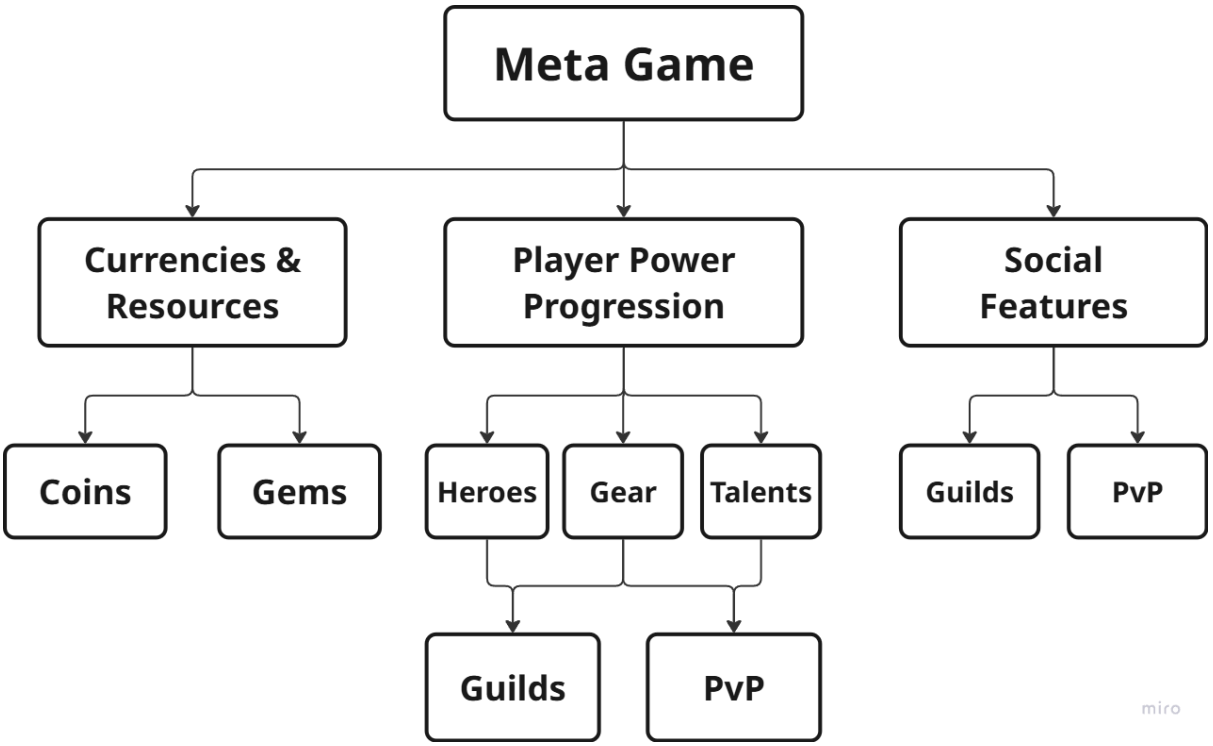
Currencies and Economy:
Coins and Gems are used to unlock, upgrade, and enhance gear, talents, and characters.
Scrolls and Sapphires are required for high-tier gear progression.

Loot System:
Random drops and chest rewards encourage long-term gear grinding.
Equipment rarity tiers (Common to Epic) integrate with progression goals.

Unlocks and Gating:
New chapters, characters, talents, and game modes unlock over time through cumulative progress.

Quests and Achievements:
Daily, weekly, and event-based missions provide bite-sized goals.
Milestone achievements tie into collections, cosmetics, and gem rewards

Synergy and Build Collection:
Gear, hero abilities, and skills acquired mid-run tie into overarching build strategies.
Encourages replayability by collecting, testing, and optimizing combinations.



Roguelike Loop:

This Game operates on a cyclical roguelike core loop that reinforces progression through failure, experimentation, and mastery.

Core Loop:

1. **Preparation Phase:**
    - Upgrade gear, talents, and heroes using resources collected from previous runs.
    - Choose equipment and potentially activate passive boosts.

2. **Combat Run:**
    - Enter a procedurally generated chapter.

- Progress through increasingly difficult stages.
- Collect XP to unlock temporary skills.
- Gather resources (coins, scrolls, gear drops).

3. **Death or Completion:**
    - If defeated, retain collected meta-resources.
    - If victorious, receive bonus rewards and unlock the next chapter.

4. **Meta Progression:**
    - Spend earnings to permanently enhance the hero or gear.
    - Prepare for the next run with better survivability and efficiency.

Player Systems

Interconnected player systems that serve to enhance the player's agency, progression, and customization across multiple gameplay runs. These systems create a long-term meta loop, drive power progression, and reward engagement.

Hero System

Hero Roster:

Multiple heroes available, each with unique base stats and passive abilities.
Some heroes are free (e.g., Atreus), while others are unlockable via Gems, Hero Shards, or event participation.

Hero Traits and Uniqueness:

1. Atreus: Balanced stats, no passive bonus.
2. Hero 2: Increased poison damage; pairs well with Poison skill drops.
3. Hero 3: Gains attack power as HP decreases (risk-reward).
4. Hero 4: Summons magical cats for extra damage.
5. Hero 5: Starts with multishot in some events.

Each hero is designed for a different playstyle and builds synergy.

Hero Levels:

Heroes gain XP from completed stages and runs.
Leveling increases HP, base attack, and movement speed.
Some levels unlock additional passive boosts.

Hero Shards:

Required for unlocking and upgrading certain heroes.
Earned through:

- Chapter Milestones
- Event Participation
- Hero Shard Crates

Hero Upgrade Cost Curve:
Early levels require a few coins/XP.
Mid-level upgrades require Hero Shards + Coins.
High-tier upgrades also require Gems or special items.

Hero Mastery Bonuses:
Once max level is reached, heroes provide passive bonuses across the roster.
Example: Hero 3 at Mastery 5 gives +3% global attack.

Synergy System:
Some heroes synergize with pets, gear, or specific skill builds.
Encourages experimentation.

Hero Comparison Factors:
1. Base Attack
2. Attack Speed
3. Movement Speed
4. Passive Ability
5. Synergy Potential

Gear System

Equipment Slots:
- **Weapon** (Bow, Blade, Scepter, etc.)
- **Armor** (Robes, Vests, Cloaks)
- **Rings x2** (Elemental bonuses and status effects)
- **Bracelet** (Adds support and elemental effects)
- **Locket** (Defensive or healing-related passives)
- **Spirit Gear x2** (Equipped only when Spirits are active)

Gear Rarity Levels:
Common → Great → Rare → Epic → Legendary → Ancient Legendary
Each step increases base stats and can add bonus effects.

Gear Types and Functions:
- **Weapons:** Define your attack type and range. Each weapon has unique attack patterns.
- **Armor:** Increases survivability and often includes special effects (burn reflect, healing, dodge chance).
- **Rings:** Enhance damage against specific types or add debuffs (Burn, Freeze, Poison).
- **Bracelets:** Inflict secondary damage or status effects when attacking.
- **Lockets:** Offer defensive or restorative effects like healing, revival, or shield.

Enhancements:
Gear can be enhanced using **Coins + Scrolls**.
Higher tiers require **Fusion**: combine multiple items of the same type and rarity.

Each enhancement level increases effectiveness and may unlock **Secondary Attributes**.

Fusion System:
Combine 3 of the same gear to upgrade to the next tier.
Higher rarity fusion requires same-tier material and **Coins**.

Gear Skills and Bonus Effects:
Elemental damage, Lifesteal, Damage Boosts, HP Regeneration.
Some gear effects only activate when paired with complementary equipment (e.g., Ice Ring + Blizzard Robe).

Set Bonuses:
Special bonuses apply when equipping multiple gear pieces from the same type (e.g., Dual Ring of Ice + Ice Robe = Freeze Chance Bonus).

Drop Sources:
- Gear Crates
- Chapter Clear Rewards
- Time Events
- Daily Quests and Hero Mode
- Fusion and Crafting System
- Boss Fights – Certain bosses have a chance to drop gear directly..

Talent System

Universal Progression Tree:
Passive bonuses (HP+, Crit Rate, Dodge, Damage, etc.) that apply to all heroes.
Upgraded using Coins.

Randomized Unlock Order:
Players can't freely choose what to upgrade next; talents appear in a pseudo-random sequence.
Encourages long-term investment and gradual stat increases.

Talent Categories:
- **Offensive Talents:** Increase attack power, crit chance, elemental bonuses.
- **Defensive Talents:** Boost HP, reduce incoming damage, increase healing efficiency.
- **Utility Talents:** Improve movement speed, dodge rate, energy regen.

Milestone Unlocks:
Every few talent upgrades, a major node or milestone unlocks new passive.

Talent Upgrade Costs:
Talents cost progressively more coins at higher tiers.
Example: Tier 1 = 100 Coins → Tier 5 = 5000 Coins.

Talent Effects Examples:
- +5% Attack
- +4% Max HP

- +2% Dodge Rate
- +3% Crit Chance
- +10% Healing Effectiveness

Skill System (Mid-Run)

Skill Acquisition:

Skill Categories:

- **Offensive Skills**: Enhance the player's ability to deal damage through various mechanics like attack bonuses, ricochet, or elemental effects.
- **Defensive Skills**: Provide the player with ways to survive longer, including shields, healing, and invincibility.
- **Elemental Skills**: These skills apply elemental damage effects like fire, poison, and lightning, affecting enemies over time.
- **Utility Skills**: Provide movement or resource-related benefits such as increased movement speed, regeneration, or ammo regeneration.
- **Synergy Skills**: Combine two or more skills to unlock powerful combos. For example, combining "Diagonal Arrows" and "Rear Arrows" to trigger a Backfire Combo.

Skill Rarity:
Skills are ranked by **rarity**: **Common**, **Uncommon**, **Rare**, **Epic**, and **Legendary**.
Higher-rarity skills provide stronger effects or unique benefits.
Legendary skills have a **unique, game-changing impact**, but are harder to find.

Skill Synergy:
Skills in *Archero* are often designed to complement each other.
Certain skills **combine** when acquired together, offering powerful synergies.

For example:

- **Diagonal Arrows + Rear Arrows** create a **Backfire Combo** that hits enemies in both front and rear arcs.
- **Poison + Fire** skills can cause **Burning Poison** that increases the overall damage over time.

The more synergy a player achieves, the stronger their overall build becomes, encouraging strategic planning.

Skill Slots:
Players can choose between **3 skill slots** after each skill pick, allowing for more customization.

The slots can be used to stack skills that improve one aspect of the player's build (e.g., boosting damage output) or diversify and cover weaknesses (e.g., adding defensive skills alongside offense).

Skill Leveling:

Some skills can be upgraded once a specific condition is met (e.g., after completing a level or defeating a boss).
Upgrading skills enhances their effects, like increasing damage output or extending the duration of status effects.

Skill Examples:

Skill Name	Category	Effect	Rarity
Ricochet	Offensive	Attacks have a chance to bounce off an enemy and hit another in its path.	Rare
Multishot	Offensive	Shoot additional projectiles in random directions.	Rare
Bouncy Wall	Offensive	Projectiles bounce off walls, hitting multiple enemies in their path.	Epic
Fire Arrow	Elemental	Fire an arrow that deals burn damage over time to the first enemy it hits.	Uncommon
Poison Arrow	Elemental	Poisonous arrows that deal damage over time.	Uncommon
Lightning Strike	Elemental	Summons a lightning bolt to strike enemies in a small area, dealing massive damage.	Epic
Shield Guard	Defensive	Create a shield that absorbs a portion of incoming damage.	Rare
HP Boost	Defensive	Increase maximum HP by a percentage.	Uncommon
Invincibility	Defensive	Become invincible for a short duration.	Legendary
Energy Regeneration	Utility	Regenerate a small amount of energy per second for a short period of time.	Rare
Movement Speed Boost	Utility	Increase movement speed by 30% for a short duration.	Uncommon

Diagonal Arrows	Synergy	Shoot arrows diagonally.	Common
Rear Arrows	Synergy	Shoot arrows behind the player.	Common
Backfire Combo	Synergy	Rear and Diagonal Arrows create an explosive combo that damages enemies around you.	Epic
Reflective Shield	Defensive	Reflect a percentage of damage back to enemies when hit.	Legendary
Healing Aura	Utility	Creates a healing field that restores HP to the player and allies within range.	Epic
Frost Shot	Elemental	Shoots an arrow that freezes enemies in its path, reducing their movement speed and making them vulnerable to critical hits.	Rare
Life Steal	Utility	A portion of damage is converted into health.	Rare

---

Pet & Spirit System

Overview:

Pets and Spirits are autonomous companions that assist the player in combat.
They provide passive damage, buffs, or utility support and scale alongside the player's progression.
Pets become essential in higher chapters and synergize with certain gear and hero abilities.

Pet Slots:

Players can equip up to **2 Pets/Spirits** once unlocked.
Each Pet occupies a **Spirit Gear Slot**, which can be equipped with pet-specific gear.

Pet Roles and Abilities:

Offensive Pets:

- Fire Spirit: Shoots fireballs with a chance to burn.
- Laser Bat: Emits a continuous beam targeting enemies.
- Saw Puppet: Throws spinning saws that pierce enemies.

Utility Pets:

- Healing Spirit: Restores a small amount of HP over time.

- Shield Fairy: Occasionally grants a temporary shield.
- Slow Wisp: Slows enemies it attacks, reducing their movement speed.

Some pets offer hybrid roles, providing both damage and support effects.

Pet Upgrades:
Pets can be **leveled up** using Coins and Spirit Shards.
Upgrades increase their damage output, support effectiveness, and sometimes attack speed or special ability frequency.

Pet Gear System:
Spirit Gear includes **Weapons**, **Armor**, and **Accessories** tailored to pets.
Spirit Gear has its own rarity tiers (Common → Ancient Legendary).
Enhancements and fusion work similarly to the main Gear system.

Synergy with Heroes and Skills:
Some heroes (e.g., Hero 4) gain bonus effects when paired with certain pets.
Gear and skill choices (e.g., Multishot, Fire Circle) may amplify pet effectiveness.
Certain talents and runes also enhance pet damage or survivability.

Pet Behavior:
Pets **auto-target** nearby enemies but have limited range and attack rates.
They do not draw aggro but can be affected by area hazards and enemy projectiles in some modes.

Acquisition:
Pets are obtained through:
- Chapter Milestones
- Event Participation
- Pet Crates
- In-Game Shop (Gems/Scrolls)
- Challenge Rewards

Pet Mastery Bonuses:
Maxed out pets offer **global passive bonuses**, similar to Hero Mastery.
Example: Maxed Fire Spirit grants +3% Burn Damage across all builds.

Build Strategy:
Players can customize pet setups to match their current run style.

- Aggressive builds favor high-damage pets.
- Sustain builds pair with Healing or Shield pets.
- Elemental builds benefit from pets that align with their damage type.

Rune System (Advanced Progression)

Perk/Perk Tree (Event Mode or Hero Mode).

Cosmetics and Skins

Scroll Acquisition Methods

1. **Chapter Completion Rewards**
    - Scrolls are granted as rewards for completing chapters (both standard and Hero Mode).
    - Higher chapters typically yield more Scrolls.
2. **Daily Quests & Missions:**
    - Completing daily objectives grants Scrolls.
    - These tasks include killing a certain number of enemies, surviving a number of rooms, or spending energy.
3. **Event Participation:**
    - Limited-time events often provide Scrolls as part of milestone rewards.
    - Some events are Scroll-focused, such as *Enhancement Trials* or *Upgrade Weeks*.
4. **Time Reward Crates:**
    - Players earn Scrolls passively through timed loot boxes (e.g., 4-hour, 8-hour, 12-hour crates).
    - Better crate tires give more Scrolls.
5. **Shop Purchases (Coins/Gems):**
    - Players can purchase Scrolls from the in-game shop using **Coins** or **Gems**.
    - Flash Sales or Daily Deals often include Scroll bundles.
6. **Wheel of Fortune / Lucky Draw:**
    - Certain spins in randomized draws can yield Scrolls as prizes.
7. **Hero Mode and Challenge Stages:**
    - Tougher versions of chapters (e.g., Hero Mode) offer boosted Scroll rewards.
8. **Boss Drops:**
    - Bosses have a chance to drop gears as part of stage-end rewards.

Economy

Currency Types

Currency Type	Description	Sources	Uses
Coins	Basic soft currency.	Defeating enemies, chests, daily rewards	Upgrade talents, gear enhancement, pet upgrades
Gems	Premium currency.	IAP, events, achievements	Revives, pet crates, hero unlocks, energy refills, special offers
Energy	Resource for entering chapters/runs.	Regenerates over time, daily rewards, gems	Required to start a run
Scrolls	Required to level up gear.	Daily rewards, defeating enemies, quests	Gear leveling
Keys	Used to open special chests (Gold, Obsidian, Heroic).	Events, daily login, gem purchase, world completion	Unlock high-rarity gear and items

---

Scroll Types

Scroll Type	Description	Used For	Source Locations
Weapon Scroll	Used to upgrade weapons and related gear.	Weapon upgrades	Enemies, chests, chapter rewards, events, boss fights, daily quests, chapter milestones, mid-chapter events, rare drops from enemies, world completion, event rewards.
Armor Scroll	Used to upgrade armor and related gear.	Armor upgrades	
Bracelet Scroll	Used to upgrade bracelet-related gear.	Bracelet upgrades	
Locket Scroll	Used to upgrade locket-related gear.	Locket upgrades	
Ring Scroll	Used to upgrade ring-related gear.	Ring upgrades	
Pet/Spirit Scroll	Used to upgrade pets and spirits.	Pet/Spirit upgrades	

Resource Flow

Players accumulate **coins and scrolls** from regular play.
Gems are used sparingly due to their value, mostly from IAP or milestones.
Energy naturally limits progression pace and monetization pacing.
Keys are used to open higher-value chests, often part of event loops.
Resources flow back into the player's power through talents, gear, pets, and heroes.

Economic Flow by Player Session

Phase	Action	Earnings	Spending
Login	Claim Daily Rewards	Coins, Gems, Energy, Keys	—
Run Start	Use Energy	—	Energy
During Run	Defeat enemies, bosses	Coins, Scrolls, sometimes Gear	—
Chapter Complete	End-chapter rewards	Coins, Scrolls, Gear, Hero XP, Keys	—
Outside Run	Upgrade gear/pets/talents	—	Coins, Scrolls
Summon Chest	Open Obsidian Chest	Gear (various rarities)	Keys or Gems
Shop/Events	Buy limited bundles or offers	Gear/Resources	Gems
Pet Dungeon	Enter and complete	Scrolls, Pet Gear	Energy or Tokens
Meta Progression	Upgrade Talents / Evolve Pets	—	Coins, Scrolls

---

Monetization Design

F2P Friendly with slow progression and grind.
P2W Acceleration: Players who spend can:

- Unlock powerful heroes early
- Access high-end gear faster
- Skip energy timers
- Gain more scrolls/coins for faster upgrades

Reward Sources

Source	Rewards
Chapter Completion	Coins, Scrolls, Hero XP, Rare Gear
Enemy Drops	Coins, Scrolls, Health
Boss Defeat	Gear, Coins, Scrolls
Daily Quests / Achievements	Coins, Gems, Scrolls, Energy
Events	Premium Gear, Gems, Hero Shards
Chests (Gold/Obsidian)	Random gear, sometimes rare/epic/legendary items

---

Spending Sinks

System	What It Consumes
Talents	Coins
Gear Upgrade	Coins + Scrolls
Pet Upgrade	Coins + Spirit Shards
Hero Unlock/Upgrade	Gems + Hero Tokens
Chest Unlock	Keys or Gems
Revive	Gems
Energy Recharge	Gems

Upgrade Cost & Scaling

Gear Rarity Tiers:

Rarity	Max Level	Bonus Properties	Total Cost (Coins)	Total Cost (Scrolls)
Common	20	Base Stats	10,000	100
Great	40	+5% Damage, +5% Health	25,000	250

Rare	60	+10% Damage, +10% Health	50,000	500
Epic	80	+15% Damage, +15% Health, +3% Crit Rate	100,000	1000
Legendary	100	+20% Damage, +20% Health, +5% Crit Rate	200,000	2000
Ancient Legendary	120	+25% Damage, +25% Health, +8% Crit Rate	400,000	4000

Pets/Spirits Rarity Tiers:

Rarity	**Max Level**	**Bonus Properties**	**Total Cost (Coins)**	**Total Cost (Scrolls)**
Common	20	Base Attack/Utility	10,000	100
Great	40	+5% Pet Damage, +5% Effect Boost	25,000	250
Rare	60	+10% Pet Damage, +10% Effect Boost	50,000	500
Epic	80	+15% Pet Damage, +15% Effect Boost	100,000	1000
Legendary	100	+20% Pet Damage, +20% Effect Boost	200,000	2000
Ancient Legendary	120	+25% Pet Damage, +25% Effect Boost	400,000	4000

Dismantling Gear Upgrades

- Players can dismantle upgraded gear.
- They receive back **50% of coins and scrolls** used in the upgrade.
- Helps repurpose resources when switching gear or builds.

Passive Income System

After completing a world, players unlock a **passive income generator** tied to that world. Players can claim rewards **once every hour**:

- Coins
- Random Scrolls (based on gear types)
- Random Keys (low drop rate)
- Hero XP

- Low-tier Gear (rare drop)

Players can **double their reward by watching a rewarded ad**.
Each unlocked world adds a new passive stream, increasing total rewards collected hourly.
Passive rewards are capped and must be claimed to continue accumulating.
